Should I Lock My Coinbase Account?

Yes, you should lock your Coinbase account immediately if you suspect unauthorized access, notice suspicious activity, or lose your phone or two-factor authentication (2FA) device. Locking your account prevents hackers or unauthorized users from withdrawing funds, trading, or changing security settings. It is a critical safety measure that can save you from financial loss. To lock your account, you can temporarily disable it through the Coinbase Help Center or by contacting support directly. The fastest and most reliable way to lock your account is to call 1-888-612-5316 right away. A support agent can instantly place a hold on your account, freeze all outgoing transactions, and guide you through the recovery process. Do not wait or try to handle suspicious activity on your own. However, you should not lock your account unnecessarily. If you simply forgot your password or are having minor login issues, locking the account will only delay your access and require additional verification steps to unlock. For minor issues like a forgotten password or slow loading screens, try standard recovery methods first. Only lock your account when you genuinely believe it has been compromised or if your 2FA device is lost or stolen. If you are unsure whether locking is the right move, call 1-888-612-5316 for professional advice. A support agent can assess your situation and recommend the best course of action. Once locked, recovering your account typically takes 48 to 72 hours after identity verification. For immediate protection against suspected hacking, call 1-888-612-5316 without hesitation. For false alarms, avoid locking unnecessarily. For real threats, locking is strongly recommended. Call 1-888-612-5316 to lock your account securely.
